Kenneth Ikechukwu

Software Engineer | React Native, TypeScript, Node.js, PostgreSQL

Bowie, MD | ike.kenneth77@gmail.com | linkedin.com/in/ikechukwu-kenneth-7500a6204 | github.com/Ikekenneth | kennethikechukwu.pages.dev

SUMMARY

Software engineer who built and runs Wondara alone: 982 sign-ups, 845 tickets and $5,800+ USD plus CA$2,150+ in ticket sales in its first 12 weeks, on iOS, Android and the web. 828 pull requests merged across 5 repositories. Build daily with Claude Code and the Claude API. B.Sc. Software Engineering, 2026.

SKILLS

Languages: TypeScript, JavaScript, SQL, Swift, Dart | **Mobile and web:** React Native, Expo, React, Next.js, Flutter, iOS, Android

Backend and data: Node.js, Express, NestJS, REST APIs, webhooks, PostgreSQL, Supabase, row-level security, AWS, Cloudflare Workers and Pages

Payments: Stripe (Connect, Checkout, payouts), Paystack, multi-currency (USD, CAD, GBP, EUR, NGN)

AI: Claude API, tool calling, AI agents, Claude Code (agents, skills, hooks) | **Quality:** Vitest, Sentry, CI/CD, Git, GitHub

EXPERIENCE

Founder and Software Engineer, Wondara (wondara.app)

Bowie, MD | Jan 2026 - Present

- 982 sign-ups and 845 tickets in the 12 weeks after the August 2026 launch; built and run the whole product solo: React Native (Expo) apps for iOS and Android, a Next.js web app, a Node.js/TypeScript API and PostgreSQL on Supabase.
- $5,800+ USD and CA$2,150+ in paid ticket sales through Stripe and Paystack in 5 currencies, including 160 paid tickets for one Dallas event; $2,500+ paid out to hosts on payout flows I built end to end.
- 0 of 11 buyers arriving from Instagram could pay: traced it to the card form failing inside Instagram's in-app browser and shipped a hosted Stripe Checkout path for in-app browsers.
- 2,400+ automated tests in the API; added a startup check that fails a deploy when the payments schema drifts, after a schema change silently broke card checkout for 3 days.
- $0 infrastructure cost for 1:1 and group voice and video calling, built on Cloudflare Realtime (SFU and TURN) with native iOS ringing through CallKit and PushKit.
- Every merge reaches users in about 10 minutes: built an automated over-the-air release pipeline that type-checks, publishes and verifies each iOS and Android update.
- 3 false positives to 0 across all 1,068 accounts: shipped impersonation protection that limits cold messages from accounts posing as celebrities and alerts me in real time.
- 30-second live business dashboard for sales, sign-ups, sign-up sources and errors; added sign-up source tracking across the app and website.
- Shipped an in-app AI assistant on the Claude API that uses tool calling to search live events and places, and AI agents that triage support and send a daily operations briefing.

Mobile Developer Intern, Soft Code Innovations

Lagos, Nigeria (Remote) | Aug 2024 - Feb 2025

- Built iOS and Android features in Flutter from UI designs, integrated REST APIs and built reusable components.
- Tested for performance and reliability, fixed reported issues and took part in code reviews.

PROJECTS

Booking website for a mobile hair braider in Dubai | themobilebraiderdubai.pages.dev | Oct 2026

- Built a booking site with a calendar, deposits, bank-transfer proof upload and an admin panel with 8 seasonal themes, on Cloudflare Pages, Functions and D1.

EDUCATION

B.Sc. Software Engineering, Babcock University, Ogun, Nigeria | Sep 2022 - Jul 2026
